

A Demo for a Centered List

Herbert Voß

14.5.2002

insert a 1x1 tabular as usual, but with a colsep of 0pt

```
\begin{tabular}{@{\textbullet}l}  
  first item\\  
  second item\\  
  third item  
\end{tabular}
```

Then you'll get a centered list:

- first item
- second item
- third item

To enable linebreaks give the table a fixed width with a column definition like `p{5cm}`. Now you get a centered list-environment where the longest line is used for the centering.

-
- first item
 - second item
 - third item
