

# Dashed Lines in Tables

Herbert Voß

12. June 2001

With the package `arydshln` you can create dashed horizontal and vertical lines. If you want to have all lines dashed for all tables in the whole document, write in latex preamble:

```
\usepackage{arydshln}
```

On the other hand you can define single dashed lines for every table like the following one:

a	a column with a with of 5cm and left laligned	text
b	main muss	text
c	main ist eine	text right aligned
d	main hat keinen	texttext
e	Array der Klasse	text

```
1 \begin{tabular}{|c:p{5cm}:r|l|}\hline
2 a & a column with a with of 5cm and left laligned & text\\
   & hdashline
3 \texttt{\small }b & \texttt{\small main} muss & text\\
   & {2-3}
4 \texttt{\small c} & \texttt{\small main} ist eine & text right
   & aligned\\
   & {1-2}
5 \texttt{\small }d & main hat keinen & texttext\\
   & {3-3}
6 \texttt{\small e} & Array der Klasse & text\\
7 \end{tabular}
```
